

"...

Boswell and Humes "have concluded that the autopsy photographs cannot prove the Warren Commission theory that a single bullet struck both Kennedy and Connolly".

Critics based doubts on sketch. Not me.

Why is there no chart of the President's head wound (the head chart is a class exercise prepared earlier by F<sub>1</sub>nick)

How did words get added to the autopsy report that are not in the draft, not in the corrections of the draft (also under photos). There is no testimony on this.

Why did doctors assume they would not see pictures?

Why did Boswell not correct his chart after he knew it was in the public record when he was specifically called upon to do just that in his testimony?
